"Interaction of oncogenic papillomatirus E6 proteins with fibulin-1.";
Biochem. Biophys. Res. Commun. 296:962-969(2002).
-I-FUNCTION: This protein has transforming activity in vitro.
-I-FUNCTION: Exhibits a strong, but non specific affinity for double stranded DNA (in vitro).
-I-SUBUNIT: Interacts with FBLN1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -i- SUBCELLULAR LOCATION: Nuclear matrix-associated.
-i- MISCELLANEOUS: HPV16, in comparison to HPV types 6 and 11, is more often associated with malignant genital cancers in humans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=90218027; PubMed=2157796; Schneider-Maumoury S., Pehau-Arnaudet G., Breitburd F., Orth G.; Expression of the human papillomavirus type 16 genome in SK-v cells, a line derived from a vulvar intraepithelial neoplasia."; J. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence Sequence Sequence

OTHER INFORMATION: Description of the artificial sequence: peptide E6 1-22
                                                                                                                      GREAT INCRMATION:

APPLICANT: COMMISSARIAT A L'ENERGIE ATOMIQUE
APPLICANT: COMMISSARIAT A L'ENERGIE ATOMIQUE
APPLICANT: INSTITUT NATIONAL DE LA SANTE ET DE LA RECHERCHE MEDICALE
APPLICANT: MAILLERE, Bernard
APPLICANT: BOURGAUIT-VILLADA, Isabelle
APPLICANT: POUVELLB-MORATILLE, Sandra
APPLICANT: GUILLET, Jean-Gerard
TITLE OF INVENTION: Mixture of peptides derived from E6 and/or E7
TITLE OF INVENTION: Mixture of peptides derived from E6 and/or E7
TITLE OF INVENTION: Mixture of peptides derived from E6 and/or E7
TITLE OF INVENTION: Mixture of Deptides derived from E6 and/or E7
TITLE OF INVENTION: Mixture of Deptides derived from E6 and/or E7
TITLE OF INVENTION: MIXTURE US/10/476,570

A/Fitle: Identification of the protein encoded by the E6 transforming gene of bovine pag
A/Reference number: A94282, MUID:86018841; PMID:2996134
A/Rontents: annotation; identification of the protein
C;Comment: This protein is present in the cell nucleus and the cellular membrane.
C;Superfamily: papillomavirus E6 protein
C;Keywords: DNA binding; early protein; transforming protein; zinc finger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A; Modecule type: DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence Sequence Sequence
